

To Whom It May Concern:

Re: **EBTRON** products' domestic content and A.R.R.A. compliance

EBTRON Inc. certifies that the products listed below are totally designed, assembled and tested in the United States and that they satisfy the definition of "domestic manufactured construction material" under the American Recovery and Reinvestment Act of 2009 (Pub. L. 111-5); including Title XVI, §1605, whose compliance is also satisfied by meeting the definition of "Produced in the United States" as referenced in 2 CFR 176.140, 176.160.

Because all of the products that **EBTRON, Inc.** supplies to the U.S. government are sold in substantial commercial quantities and are unmodified for sale to U.S. government agencies, **EBTRON** may also claim the COTS exception to the "component test" under 41 USC 431. All products manufactured by **EBTRON, Inc.** in Loris, SC, USA therefore qualify as "domestic end product" under §25.101 and §25.200 of the Buy American Act. 2009 (BAA) 41 USC 10.

However, even if required to satisfy the 'component test,' most if not all models have domestic content exceeding the total cost of all components. The average domestic portion of the total value of each product varies with size and model, but typically exceeds this minimum majority requirement.

Applicable Products:

GTx116 -P, -P+, -B
