

Packaged Damper and Airflow Measurement Combo

Superior Performance. Unmatched Flexibility.

The AIR-IQ2 solution combines EBTRON's Gold Series GTx116e-PC/H high-density airflow measuring station with TAMCO's high-quality airfoil damper in a laboratory-tested assembly that eliminates the challenges of field locating air measuring devices.

The multi-point GTx116e series features up to 16 individual sensor nodes, factory-calibrated to NIST traceable airflow and temperature standards with a durable optional RH sensor. Measure airflow, temperature, relative humidity, dew point, or enthalpy in outdoor air intakes, track floor-to-floor airflow for building pressurization, and control unducted return or exhaust airflow.

The Air-IQ2 requires no periodic calibration or adjustment, offers many connectivity options to integrate with the BAS, and can provide individual sensor traverse data.
