

Better Measurement, Better Control, Better IAQ

Improve Your System, Save Energy, and Ensure Occupant Comfort.

EBTRON's state-of-the-art airflow measurement technology for ducts and plenums offers accurate, repeatable, and long-term stability for years of reliable building operation. An onboard barometric pressure sensor, a velocity-weighted temperature sensor, and an optional ruggedized relative humidity (RH) sensor enable accurate relative humidity, enthalpy, and dew point calculations. This solution is ideal for supply, return, and outdoor air intake applications on systems with an airside economizer. The EB-Link App with a smartphone and Bluetooth® connectivity provides measurement data and easy commissioning with the touch of your finger.
