

# IAQ ENFORCER

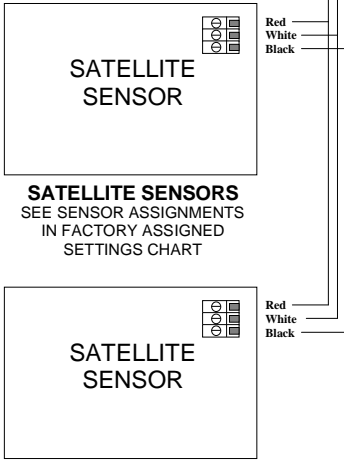

## SPC PANEL SYSTEM WIRING DIAGRAM

Satellite sensor probes can be "daisy chained" on a single, 3 conductor cable or wired individually. Port terminal blocks are for ease of wiring only; satellites can be connected to any port.

All sensor diagnostics and/or reprogramming can be accomplished with supplied software and interface via RS-232 interface to any Window95, NT 4.0, or higher based system.

**All electrical connections should be made with the power switch to "OFF"**
