

Efficiency, Performance, and Reliability

Precision airflow, temperature, and humidity measurements

EBTRON offers a variety of solutions to measure and control air-side performance, from air handling equipment and duct-mounted products to server-focused aisle containment solutions such as the bleed airflow and SERVAIRE products that provide bi-directional airflow and temperature measurement. Various connectivity options are available to provide integration for monitoring and control.

EBTRON airflow measuring devices are installed in data centers worldwide, providing accurate and repeatable measurements for efficient and reliable operations.
