AIR-IQ SMART-SOLUTION
You provide us with the:
• Opening size
• Damper series
• Mounting application
• Access requirements for probes

We build your unit with the:
✓ Optimal probe sensor density
✓ Ideal probe placement
✓ Appropriate sleeve style

BENEFITS
• Satisfy ASHRAE® 62.1, 189.1 & 90.1
• Obtain LEED® points
• Improve indoor air quality
• Save energy
• Reduce maintenance costs

APPLICATION
• Outside air intakes
• Floor return airflow tracking
• AHU return & bypass flow measurement

TWO PREMIER MANUFACTURERS
ONE EXCEPTIONAL PRODUCT
AIR-IQ PACKAGE COMPATIBLE WITH MULTIPLE DAMPER SERIES
QUALITY & RELIABILITY

TAMCO® and EBTRON® are known for unsurpassed quality and reliability. This partnership joins the two premier manufacturers and brings together their respective fields of expertise to create a single, premium package that is easy to specify, purchase and install.

TURN-KEY SOLUTION

This TAMCO/EBTRON solution combines a premium airflow measuring station with a quality air-foil damper in a laboratory-tested assembly that takes the guesswork out of airflow measurement.

The unique design reduces turbulence and pressure losses associated with typical sheet metal, sleeved construction. The AIR-IQ package is ideal for:

- Direct measurement of outside airflow rates.
- Return airflow measurement on floor-to-floor systems for building pressurization.
- Return airflow measurement, directly on an air handler.
- AHU return & bypass flow measurement

FLEXIBILITY

The TAMCO/EBTRON AIR-IQ package combines EBTRON’s Gold Series GTX116-PC high-performance airflow measurement technology with any TAMCO Series damper, providing unprecedented flexibility in airflow control. Whether the application is intake, exhaust, severe cold, or salt spray, there is a TAMCO®/EBTRON AIR-IQ solution.

ACCURACY & REPEATABILITY

EBTRON’s field-proven thermal dispersion technology ensures accurate and repeatable airflow measurement over the entire range of airflow rates and temperatures required by today’s high-performance buildings. Up to 16 individual sensor nodes are factory calibrated at sixteen airflow rates between 0 and 5,000 FPM to NIST traceable standards in EBTRON’s state-of-the-art calibration facility.

MAINTENANCE-FREE PERFORMANCE

TAMCO’s aluminum damper construction provides a prolonged and rust-free operational life. All damper components are designed to provide optimal and completely maintenance-free performance. TAMCO’s slip-proof linkage components keep blades aligned as per factory adjustment. The hexagon design feature of the linkage and pivot elements allows for flat-on-flat press fits, eliminating play and wear. TAMCO’s Dual Bearing System eliminates action between metal-to-metal and metal-to-plastic riding surfaces. Bearings never require additional lubrication and have a service life of 20 years plus.

EBTRON’s thermal dispersion technology uses stable bead-in-glass thermistor probes and a high-performance, microprocessor-based transmitter. Performance is percent of reading and no additional transmitters or transducers are required to interface with your building automation system (BAS). EBTRON airflow sensors do not require periodic calibration or adjustment in most HVAC environments.
INTELLIGENT DESIGN

A - TAMCO Damper Assembly
A-1 TAMCO’s Slip-Proof, Maintenance-Free Linkage System
A-2 TAMCO’s Dependable Dual Bearing System
A-3 TAMCO’s Low-Leakage Blade and Frame Seals

B - TAMCO Sleeve Assembly
B-1 TAMCO’s All-Aluminum Extrusion Sleeve
B-2 TAMCO’s All-Aluminum 3” Curved Flare

C - EBTRON Airflow Measurement Probes
C-1 Stable Bead-in-Glass Thermistors
C-2 FEP Plenum Rated Cable with Gold Plated Connector Pins

D - EBTRON Digital Transmitter
D-1 Standard Output Card: RS-485 BACnet/Modbus with two isolated analog Outputs*
D-2 Optional Output Card: Ethernet BACnet/Modbus with two isolated analog outputs*
D-3 Optional Output Card: Lonworks free topology
D-4 Optional Data Logger Card: (no outputs)

*Analog outputs can be configured as airflow + temperature or as airflow + airflow alarm.
EBTRON’s reliable Thermal Dispersion technology is field proven with over 1,000,000 sensors installed since 1984 and is ideal for all airflow rates common in today’s HVAC applications including the direct measurement of outside air.

Precision bead-in-glass thermistors result in long-term stability and drift-free operation.

Sensor probes are provided with durable, FEP jacketed, plenum rated cables, which can be exposed to UV and ultracold temperatures.

NIST traceable calibration standards ensure accurate measurement.

Each sensor node (up to 16 per transmitter) is computer-calibrated at 16 airflow rates, to ensure 2% of reading sensor accuracy over the entire operating range.

The transmitter is available with an RS-485 BTL® listed (BACnet or Modbus) interface or with an Ethernet interface; both with dual analog outputs (0-5/0-10VDC or 4-20mA) and an advanced programmable alarm interface. Protocols, output signals and alarm features are field-configurable.

Transmitters are also available with a Lon network interface or with a unique Data Logger card for logging on USB thumb drives.

The transmitter is available with an EB-Link option for infra-red acquisition of transmitter flow and temperature data using hand-held EB-Link Reader or PDA device.

The transmitter can be configured to set a visible and digital alarm if flow rates are outside of a user specified range.

The airflow measurement device is UL® and BTL® listed.

### DAMPER & SLEEVE FEATURES

The AIR-IQ unit can be assembled with any of the following Series of TAMCO dampers: 1000 / 1500 / 1400 / 9000 / 9000 SC / 9000 BF / 9000 ECT.

Salt water resistant dampers and sleeves are also available (TAMCO Series 1000 SW / 1400 SW / 1500 SW / 9000 SW).

Aluminum construction contributes to a prolonged and rust-free operational life.

Aerodynamic, radius entry flare improves accuracy and stability in non-ducted and plenum applications.

TAMCO’s engineered damper and sleeve, combined with EBTRON’s high sensor density probes will not require field calibration or adjustment when installed in accordance with published guidelines.

Depending on installation accessibility requirements, probes can be provided in parallel-to or perpendicular-to damper blades mounting configurations. In addition, probes can be mounted internally within the sleeve or inserted through the side of the sleeve. This information should be provided at the time a quote is requested.
AIR-IQ GENERAL MECHANICAL OVERVIEW

AIR-IQ TYPICAL SINGLE SECTION HORIZONTAL BLADE DAMPER

Provide adequate clearance for actuator motor and mounting selected. For TAMCO actuator installation options, refer to actuator motor mounting methods at the following link: http://www.tamco.ca/english/mm_methods.html

AIR-IQ TYPICAL TWO-SECTION HORIZONTAL BLADE DAMPER

Contact TAMCO Customer Service for information regarding sleeve sizes and finished outside flare dimensions for two-section assemblies.
ENGINEER’S GUIDE SPECIFICATION

CONTROL DAMPER WITH INTEGRAL AIRFLOW MEASURING DEVICE

Provide an integral airflow/temperature measurement control damper package. Package shall not require any additional duct work or sleeve, when installed in accordance with manufacturer’s specified placement guidelines.

Manufacturer and Model:

- TAMCO/EBTRON Series [insert appropriate TAMCO damper series] AIR-IQ

Damper and Sleeve Assembly:

- Provide one or more damper sections for each location indicated on the plans. Damper section(s) shall be integral to sleeve assembly.
- Provide a factory-assembled, extruded aluminum (6063T5) sleeve, no less than .080” thick for each damper section. Sleeve depth, including damper frame, shall be 15” for ducted applications and 18” for non-ducted applications. Non-ducted applications shall include a 3” radius aluminum entrance flare not less than .060” thick. Provide an additional 7” (10” for ducted applications) between the downstream edge of an intake louver and the leading edge of the sleeve for outside air intake applications that are close-coupled to intake louvers.
- Provide extruded aluminum (6063T5) damper frames, not less than .080” thick and 4” deep.
- Provide extruded aluminum (6063T5) damper blade profiles. Blade seals shall be extruded EPDM or silicone (dependent upon damper Series selected). Frame seals shall be extruded silicone. Seals shall be secured in an integral slot within the aluminum extrusions.
- Bearings shall be composed of a Celcon inner bearing fixed to a 7/16” aluminum hexagon blade pin, rotating within a polycarbonate outer bearing inserted in the frame, resulting in no metal-to-metal or metal-to-plastic contact.
- Linkage hardware shall be installed in the frame side and constructed of aluminum and corrosion resistant, zinc-plated steel, complete with cup-point trunnion screws for a slip-proof grip.
- Damper air leakage shall not exceed 3 cfm/ft² against 1” w.g. differential static pressure.
- Dampers shall be available with either opposed blade action or parallel blade action and made to size without blanking off free area.
- Dampers shall be designed for operation in temperatures ranging between -72° F and 212° F.
- Thermistors shall be potted in an engineered thermoplastic assembly using water-proof, marine epoxy and shall not be damaged by moisture or direct contact with water.
- Signal processing circuitry on or in the sensor probe is not acceptable.
- Each sensor probe shall consist of one to eight independent sensor nodes in a gold anodized, extruded aluminum (6063T5) tube with aluminum mounting brackets.
- Each sensor node shall consist of two hermetically sealed bead-in-glass thermistors. Chip thermistors of any type or packaging are not acceptable.
- Thermistors shall be potted in an engineered thermoplastic assembly using water-proof, marine epoxy and shall not be damaged by moisture or direct contact with water.
- Each sensing node shall be individually wind tunnel calibrated at 16 points to NIST traceable airflow standards.
- All internal wiring between thermistors and probe connecting cables shall be Kynar® jacketed.
- Manufacturer shall provide UL listed, FEP jacketed, plenum rated cable(s) between sensor probes and the remote transmitter.
- Each sensing node shall have a temperature accuracy of +/- 0.15° F
- Each sensing node shall have a calibrated airflow accuracy of +/- 2% of reading and the overall installed assembly of the accuracy shall be better than +/- 5% of reading at any damper position.
- The ATMD shall be capable of measuring airflow rates over the full range of 0 to 5,000 FPM between -20° F and 160° F.
- The transmitter shall be powered by 24 VAC, be over-voltage and over-current protected, and have a watchdog circuit to provide continuous operation after power failures and/or brown-outs.
- The power requirement for the ATMD shall not exceed 22 V-A.
- The transmitter shall determine the airflow rate and temperature of each sensing node prior to averaging.
- RS-485 and Ethernet transmitters shall have two isolated and fused analog output signals and one capable of concurrent operation with the network connection.
- Analog outputs shall be field configurable as linear 0-5 VDC, 0-10 VDC or 4-20mA signals.
- One analog output signal shall provide the average airflow rate.
- One analog output signal shall be field configurable to output the average temperature, the velocity weighted temperature or a field programmable binary airflow alarm.
- The RS-485 network connection shall be field configurable as BACnet MS/TP or Modbus RTU.
- The RS-485 connections shall be capable of transmitting the average airflow rate, average temperature, individual airflow rates of each sensor node, and individual temperatures of each sensor node and system status.
- All integrated circuits shall be industrial rated
- All electrical plugs, receptacles and circuit board interconnects shall be gold-plated.
- The ATMD shall be ULcUL873 listed.
- The ATMD shall be BTL listed.
